

SLIPSTOP – OUTDOOR TILES

For materials with anti-slip properties, due to their specific surface characteristics, the following maintenance instructions are recommended:

GENERAL CLEANING

- Tools
 - microfiber mop, to avoid the release of fiber remains due to the roughness of the floor.
 - hard bristle floor brushes, suitable for outdoor floors.
 - if it is a garden area or outdoor terrace, clean with high-pressure water.
- Cleaning products
 - Any commercial floor cleaner, based on surfactants, not waxes or polishes. It is important that it does not contain waxy products (they generate films on the surface)

CLEANING OF SPECIFIC STAINS

- Tools
 - melamine sponge (commercially magic eraser).
 - hard bristle floor brushes, suitable for outdoor floors.
 - if it is a garden area or outdoor terrace, clean with high-pressure water.
- Cleaning products
 - Depending on the stains, use specific products.
 - Inorganic remains (rust, construction,...) → descaling agent.
 - Organic remains (food,...) → degreasing products
 - Remains of paint or dyes → solvents
 - Consult each specific case and follow the instructions of the ceramic manufacturer and product supplier.
